

Applied Technology 2: CNC Machining

Grades 10-12

Units of Credit: One Year (Elective)

Prerequisites: Applied Technology I

Course Description:

In this course, students build upon the knowledge and skills gained in Applied Technology 1. The focus of this course is to learn about the fundamentals of Computer Numeric Control (CNC) Machining. Students will learn how to design a part with the use of computer aided design and machining (CAD/CAM) software. Once parts are designed, they are machined using computer controlled milling machines and lathes. Projects are created based on the manufacture of parts using CNC machining technology. This course will require students to apply general math and science concepts to advanced problem solving and machining activities. Students will be assessed through observation, performance on tests, quizzes, assigned tasks and projects and by the quality of work produced.

Topics:

- CAD/CAM software
- CNC milling machines
- CNC lathes
- Application of basic geometry to part design
- Troubleshooting and problem solving
- Manufacturing materials and processes
- Measurement and layout tools
- Basic hand tools
- Interpretation of engineering drawings
