Markscheme   2013 - 2014

CODE	INTERPRETATION
M	A specific Method is required.
D	A correct Diagram is required.
R	Point(s) for required clear Reasoning (including but not limited to verbal modeling, modeling with an equation, and/or diagramming).
W	Point(s) for required Work shown (including but not limited to correct substitution and manipulation of values).
E	Exact, simplified, non-decimal answer values are required. There are VERY few exceptions, e.g., SOMETIMES when comparing/graphing numbers, giving responses to "real-life" problems, specifically directed to approximate an answer...i.e., there must be a REASON. Even exact decimal values should be expressed as fractions (proper or improper; no "mixed" numbers).
A	Correct Answer. Points are not automatically awarded for a correct answer; when preceded by M/D/R/W, point(s) depend upon answer being adequately and correctly substantiated. It is not possible to award M0 or W0 followed by A1.
F	Follow through, only applied after an error is made, are awarded where an incorrect answer from one part of a question is used correctly in subsequent part(s).
N	If no work shown, points may be awarded for correct answers but there will be fewer points available than the total of other marks to penalize for not showing work.
( )	Brackets indicate M/R/W may be IMPLIED by correct subsequent work shown. NOTE: Marks without brackets indicate points are only awarded if correct work is seen.
e.g., M/D1	Method AND Diagram both required; 1 pt total.
e.g., M1/D1	Method 1 pt and Diagram 1 pt; 2 pts total.
W2 or A3	Marks cannot be split (i.e., no partial credit).
